AUTODBC and Teradata V2R3 Installation Update for VM

When installing the AUTODBC utility for FOCUS on VM for use with Teradata V2R3, a change in the installation steps is needed in order to utilize some new code.

A new FOCEXEC called ADUB23IN needs to replace the supplied ADUBTQIN FOCEXEC.

Prior to executing the AUTODBC EXEC, the ADUBTQIN FOCEXEC should be renamed, and ADUB23IN should be renamed to be ADUBTQIN. After completing these steps, the AUTODBC installation procedure outlined in the *Teradata Read/Write Interface Installation Guide* should be followed.

Affected Release levels

This procedure is applicable to all FOCUS releases on VM.
